# Lintels

## Introduction

Lintels are considered as beams that span over window or door openings. Lintels require special reinforcing details to meet the local code requirements. The following diagram illustrates typical wall opening details;

As can be seen from the diagram above the lintel top and bottom reinforcement must extend the proper development length beyond the face of the opening and is indicated as (W) on the figure. The minimum development length depends on many factors. As a rule of thumb the minimum development length should be not less than 40 times the bar diameter and the minimum required should not be less than 24 inches in order to use the Amvic lintel charts. Table A0 gives the minimum (W) for the different reinforcing bars used in the charts.

If the wall opening is near the end of wall length and there is not enough space left for proper development length then the lintel reinforcing bars should be bent around the corner at 90 degrees into the adjacent perpendicular wall.

**Table A0 – Minimum Development Length (W) For Lintel Top & Bottom Reinforcing Bars**

<b>Rebar Designation</b>	<b>Development Length (W)</b>
<b>Canadian</b>	
10M	609 mm (24 in)
15M	640 mm (25 in)
20M	780 mm (30.7 in)
25M	1008 mm (39.7 in)
30M	1196 mm (47 in)
<b>United States</b>	
#3	24 in
#4	24 in
#5	25 in
#6	30 in
#8	40 in
#9	45 in

**Table A2 – Limitations for United States Lintel Charts**

<b>Item</b>	<b>Description</b>	<b>Limit</b>
General	Number of stories	2 above grade
	Maximum Storey Height	12 feet
	Maximum Floor Clear Span	40 feet
	Maximum Roof Clear Span	42 feet
Dead Loads *	Floor	15 psf
	Partitions	10 psf
	Roof	15 psf
	Concrete Density	150 pcf
Live Loads *	Main Floor	40 psf
	Second Floor	30 psf
	Attic	20 psf
	Ground Snow Load	30 psf
		50 psf
Material Properties	Concrete F'C	3000 psi
	Steel Fy	60,000 psi

\* All loads given in table A1 & A2 are service loads i.e. not factored

## **Other Structural Assumptions:**

Several assumptions were made for the lintel charts as listed below:

- 1- Concrete compressive strength at 28 days  $F'_c = 20 \text{ Mpa}$  (3000 psi)
- 2- Steel reinforcing bars yield strength  $F_y = 400 \text{ Mpa}$  (60 ksi)
- 3- Lintels are considered as single span beams with fixed ends due to the fact that the walls and lintels are monolithically cast.
- 4- All loads on the lintels are assumed as uniformly distributed loads. No concentrated loads from girders or trusses were considered.
- 5- Maximum reinforcing bar size used is 30M for Canada or #9 for the US.
- 6- Maximum number of bars for top or bottom of lintels is 2. No bundled bars were considered.
- 7- When the chart identifies a single reinforcing re-bar (e.g. 1-15M or 1-#5) for top or bottom, a single C-stirrup should be used as per the charts. If however double reinforcing bars for either top or bottom of lintel is identified (e.g. 2-15M or 2-#5) then a double C-stirrup MUST be used.
- 8- Never exchange a double reinforcing bars configuration for a single larger size bar (e.g. don't use 1-15M or 1-#5 instead of 2-10M or 2-#4 respectively)
- 9- The Canadian lintel charts are based on CSA A23.3
- 10- The US lintel charts are based on ACI 318
